**Subject:** Oil spill sampling efforts on Gaviota Coast

Hi Ned,

Thanks again for your call. As I mentioned, our work involves assessing contamination and other impacts from oil operations and we are very interested in the sampling efforts related to the oil spill near Refugio. It would be great to talk with some of the other groups that are collecting samples (e.g., tissue, water, sediment) and testing for organics, and (if possible) see any data.

At your earliest convenience, would you send the contact information of anyone you think I should speak with about current and future monitoring in the area?

Best,

Alex
